Noida, Uttar Pradesh, India

SUMMARY

Product-focused individual with experience analyzing user journeys, improving product experiences, and shipping AI products end-to-end. Skilled in market research, go-to-market strategy, AI integrations, feature prioritization, and regulatory compliance (DPDP). Interested in building user-centric solutions and contributing to scalable product development.

WORK EXPERIENCE

Orderly (tryorderly.sh)

Jan 2026 – Mar 2026

Product Management Intern (Part-time)

Remote

- Contributed to development of an AI-based restaurant ordering product enabling QR-based voice ordering without app downloads.
- Evaluated onboarding and ordering flows, identifying 3 key friction points impacting successful order completion.
- Proposed flow simplifications that reduced user steps from 7 to 4, improving ordering efficiency.
- Collaborated with founders on feature decisions, prioritizing features based on user impact and feasibility.
- Worked with engineering team to understand constraints in voice processing and real-time handling.
- Analyzed early user behavior to identify adoption and usability issues.

Quant Catalyst

Oct 2025 – Nov 2025

Research Intern

- Conducted structured analysis of 50+ startups across SEA, SA, and MEA for North American expansion.
- Built frameworks for market entry feasibility and competitive positioning.
- Assessed business models, demand, and scalability across geographies.

Quant Catalyst

Oct 2025 – Nov 2025

Product Strategy – Petcare Brand (“Nootie”)

- Designed go-to-market and viral marketing strategy focused on segmentation and positioning.
- Coordinated with social media agencies for campaign execution; evaluated competitor landscape to identify differentiation opportunities.

PROJECTS

Project Adhikar — DPDP-Compliant Consent & Data Rights Redesign (Zomato)

[Live: zomatodemo.garvitoberoi.com](https://zomatodemo.garvitoberoi.com)

- Redesigned how Zomato asks users for data permissions to comply with the DPDP Act 2023 — built 6 screens covering clear notices, purpose-wise consent, and easy opt-out.
- Audited existing data collection flows against DPDP obligations and prioritized fixes by legal-risk severity vs. user friction.
- Evaluated alternative approaches for minors’ consent — DigiLocker-verified parental consent and ML-based age estimation — and scoped their trade-offs.
- Shipped an interactive prototype demonstrating the redesigned consent flows end-to-end.
- Defined success metrics: consent completion rate, drop-off at notice screens, and grievance resolution TAT.

ShipFlow AI — AI-Powered Software Delivery Platform

[Live: shipflow.garvitoberoi.com](https://shipflow.garvitoberoi.com)

- Built and shipped an end-to-end delivery platform solo: PM planning portal, developer Kanban, and automated AI code review on real GitHub pull requests.
- Designed a dual-pass AI review engine after identifying single-pass reviews missed context-dependent bugs — a deliberate accuracy vs. cost trade-off.
- Defined success metrics: review turnaround time, findings per PR, and false-positive rate.

EDUCATION

JSS Academy of Technical Education, Noida

2023 – 2027

Bachelor of Technology in Information Technology

Dayawati Modi Academy

2022 – 2023

Class XII

SKILLS

Product: Product Thinking, User Journey Analysis, Friction Identification, Feature Prioritization, Trade-off Analysis

Research: Market Research, Competitive Analysis, Problem Structuring, Regulatory Analysis (DPDP Act 2023)

Collaboration: Cross-functional Coordination (Product, Tech, Business)

Technical: HTML, CSS, JavaScript, C++, AI/LLM Integrations, System Design (Basic)

Tools: Excel, Google Sheets, Notion, Jira, Figma (Basic), Supabase, Vercel, Git/GitHub
